Microbes in Health & Disease Research
Microbial Diversity & Ecology

Dr. Brian Hedlund
Professor
School of Life Sciences
Phone: 702-895-0809
Email: brian.hedlund@unlv.edu

Expertise
- Microbial diversity exploration
- Cultivation of recalcitrant microorganisms
- Systems biology
Exploring microbiology’s “dark matter”
- Environmental genomics
- Genome-enabled cultivation
- Transcriptomics, proteomics, metabolomics
- Stable-isotope experiments
Big questions

• What is the function of billions-year-old microbial lineages that have never been cultivated in any lab? Why have they rebuked microbiologists for centuries?
• How can we organize and communicate microbial diversity effectively?
• How does thermal stress affect biology?
• How can we use microbial diversity to solve human problems?

Bacterial Physiology Research

Dr. Boo Shan Tseng
Assistant Professor
School of Life Sciences
Phone: (702) 895-2700
Email: boo.tseng@unlv.edu

Expertise:
• *Pseudomonas aeruginosa*
• Biofilms
• Bacterial stress response
• Antimicrobial susceptibility
• Cystic fibrosis lung infections
Identifying the roles of biofilm matrix components

Functions in biofilm formation

Functions in antimicrobial susceptibility

Treated with elastase (green: alive; purple: dead)
Mechanism behind the essentiality of bacterial envelope stress inhibitor

- Exopolysaccharide overproducing (e.g. mucoid) bacteria arise during chronic lung infection
- Associated with poor disease outcomes
- Due to mutation in \textit{mucA} gene, which encodes for inhibitor of envelope stress response via AlgU
- BUT \textit{mucA} required for bacterial viability and overproduction of AlgU inhibits growth

Question: why is a gene commonly mutated in clinical isolates required for bacterial viability?
Microbiology

Dr. Helen J. Wing  
Professor,  
School of Life Sciences  
Phone: 702-895-5382  
Email: helen.wing@unlv.edu

Expertise
- Microbiology focusing on agents of Infectious Disease
- Bacterial Gene Regulation
- Bacterial Physiology
- Molecular Biology controlling virulence
- Identification of novel drug targets
- Antibiotics use & Antibiotic resistance
Genetic switches & molecular mechanisms controlling virulence

Central themes of this project
- Transcriptional control of bacterial genes
- Dynamic nucleoid remodeling
- DNA-protein and ligand-protein interactions
- Evolutionary relationship of bacterial proteins
- Bacterial management of large plasmids
- Novel targets for antibiotics and therapeutics

A: Current model

Step 1: Non-specific interactions with DNA (in vitro only)
Step 2: Binding to its recognition site is a prereq. for ∆ik, focus formation & anti-silencing
Step 3: Spreading along DNA causing torsion in the DNA helix. The triggered change in DNA supercoiling is sufficient to relieve gene silencing.

A

B

C

CTP

Step 2: Binding to its recognition site is a prereq. for ∆ik, focus formation & anti-silencing

Step 3: Spreading along DNA causing torsion in the DNA helix. The triggered change in DNA supercoiling is sufficient to relieve gene silencing.
**Shigella** pathogenesis

**Fast Facts**
*Shigella* species - causal agents of bacillary dysentery

Cause an estimated 80-165 million cases per year and 600,000 deaths, mostly in children under 5 years.

- Highly infectious (low infectious dose)
- Increasingly resistant to commonly used antibiotics

Central themes of this project

Why are these pathogens so infectious?
- we explore their acid resistance (stomach acid)

How do they enter host cells?
- we study regulation of the Type III secretion system (a bacterial conduit that delivers proteins into host cells).

How do these bacteria cause disease in humans?
- one way is to hijack the host’s actin cytoskeleton. The bacteria use the actin to move through the host cell cytoplasm!

Through these studies we hope to identify new ways to treat & prevent Shigellosis
Management & Leadership of UNLV VTM production for SNPHL

Through April 2020 and into the Fall, Dr. Wing led a team of volunteers in making VTM(S) media for Southern Nevada Public Health Labs.

Volunteers came from the School of Life Sciences, Department of Chemistry and the UNLV School of Medicine (listed below).

By the end of the project 50,000 vial of medium had been made, which were used by SNPHL Strike teams to test for SARS-Cov-2 (the agent of COVID-19 disease)

UNLV Volunteers:

**UNLV SoLS:** Monika Karney (Wing Lab Manager and co-lead), Holly Martin (Grad), Tatiana Ermi (Grad), Shrikant Bhute (Post-doc), Isis Roman (Undergrad), Boo Shan Tseng (Asst Prof.) & Cody Cris (Undergrad/Grad).

**UNLV Chemistry:** Ernesto Abel-Santos (Prof and co-lead), Naomi Okada (Grad), Jacqueline Phan (Grad), Chandler Hassan (Grad), Lara Turello (Grad) & McKensie Washington (Undergrad),

**UNLV SoM:** James Clark, Michael Briones, Liz Groesbeck & Anita Albanese (all Med students)
